Jargon/Metrics for MIS Data Analytics Case Competition

- Latest – Latest traffic count data per adjacent date shown in vehicles per day (VPD)
- Volume – Traffic volume quantifies the number of vehicles on a road at a particular time.
- Capacity – The upper limit of traffic flow that a road can accommodate before performance deteriorates or when congestion occurs.
- V/C Ratio: The volume of the roadway divided by the capacity of the roadway. When volume meets capacity, the V/C Ratio becomes 1.0. When the ratio increases beyond 1.0, the intersection is considered "over-capacity".
- Number of lanes: The number of lanes is counted for both directions. Examples:
    - Two-Lane Road: One lane in each direction
    - Three-Lane Road: One lane in each direction with a center left-turn lane between them
    - Four-Lane Road: Two lanes in each direction
    - Five-Lane Road: Two lanes in each direction with a center left-turn lane between them
    - Six-Lane Road: Three lanes in each direction
- Functional Classification: The functional classification of a roadway describes the purpose of the roadway, described by its ability to provide access versus its ability to provide mobility. Examples:
    - Interstates and Freeways: Highest Mobility – Lowest Access – Example – State Highway 9, Interstate 35. (This class of roadways will not be utilized in this project.)
    - Principal Arterial – High Mobility – Low Access – Example – Flood Avenue between Franklin Road and Robinson Street.
    - Section Line Road – Medium-High Mobility – Medium Access – These are generally arterial type roadways that run on a one-mile grid. Most important in rural areas.
    - Minor Arterial – Medium Mobility – Medium Access – Example – Robinson Street from 36th Ave NW to 36th Ave NE.
    - Collector – Low Mobility – High Access – Example – Summit Crossing Parkway from 24th Ave SE to 36th Ave SE. (This class of roadways will not be utilized in this project.)
    - Local Road – Lowest Mobility – Highest Access – Example – Johnson St from Fay Ave to Porter Ave (This class of roadways will not be utilized in this project.)
